

KIER DARYL ABIAD

Imus City, Cavite | P: +63 9626614618 | kier.abiad@gmail.com

CAREER OBJECTIVE

Enthusiastic about building the future through software. Seeking a role in an environment where I can leverage my dedication, strong communication skills, and collaborative spirit to contribute to innovative software projects.

EDUCATION

TECHNOLOGICAL INSTITUTE OF THE PHILIPPINES

Manila, PH

Bachelor of Science

Aug 2025

Major in Computer Science

Cumulative GPA: 1.77

Relevant Coursework: Machine Learning, Software Engineering; Operating Systems; Algorithms; Database Systems

INTERNSHIP

DE LA SALLE UNIVERSITY

Dasmariñas, PH

Student Intern

Dec 2018 – Feb 2019

- Assisted in computer hardware diagnostics and repairs within the school environment. Collaborated with fellow Lasallian students on structured cabling tasks, including terminating Ethernet cables using RJ45 connectors and adhering to standard wiring protocols

MALAYAN INSURANCE CO., INC.

Binondo Manila, PH

IT Infrastructure Security

May 2024 – August 2024

- Contributed to strengthening Malayan Insurance Company's IT infrastructure by assisting in the implementation and maintenance of cybersecurity controls, performing vulnerability assessments using industry-standard tools, and supporting incident response procedures, while developing hands-on experience in network security, threat analysis, and system hardening.

UNIVERSITY PROJECTS

Firestore: Login Database Project

- This project allows users to create an email and password after doing it will send a verification code thru mail app. The administrator can modify the user's account by reading it in the database and can also update the user's information the user also allows to reset his/her password thru mail app.

Java Simulation of Sorting Algorithm

- Visualize and explore the inner workings of sorting algorithms through an interactive Java simulation.

Java Student Management System

- Student management system in Java, define functionalities, design classes for data, use a database, build a user-friendly interface, implement core logic, enable reporting, test thoroughly, and deploy.

Predictive Modeling of Points in College Basketball Players (2009-2021): A Comparative Regression Analysis

- A comparative study assesses the effectiveness of different regression models in predicting college basketball player points scored.

Optimizing CNN for Detecting Severe Bacterial Blight in Crop Health Monitoring

- Designed and optimized a CNN-based deep learning model to detect severe bacterial blight in crops, improving classification accuracy, inference speed, and memory efficiency for real-time precision agriculture applications.

ADDITIONAL

Technical Skills: C, C++, Java, Databases, Python, Machine Learning

Certifications & Training: Online Course in Management (Udemy) Java Programming, (DataCamp) AWS Concept, Understanding Cloud Computing, (Microsoft) Introduction to Machine Learning

Seminars/Webinars: AWS Community Day PH 10 Year Anniv., Google Developer Group (GDG) [Web Dev Study Jam] Ride the Tailwind's Blow, [Game Dev Study Jam] Behind The Screens: Introduction to Video Game Graphics, [UI/UX Study Jam] Figma Legends, [Figma Legends: Crafting Winning Designs From Lo-fi to Hi-fi], Git Started with GitHub: Foundational Dev Workshop, [Web Dev Study Jam] From Spark to Blaze, Firebase Firestore Fundamentals
